Various Locations, CO

20' x 20' Arch Building

26' x 30' Utility Series

10' Single Bay Crescent Building

QuickStructures Oil & Gas Solutions

The QuickStructures product line is a perfect solution for industrial coverage in isolated or rural areas. The buildings can be built with both open ends, one closed end, or two closed ends, allowing adequate ventilation and dampening the sound of the equipment while maintaining weather protection. At the same time, they allow natural light inside so on-site workers aren't left in the dark while performing testing, maintenance, and construction. Some of these projects shown have been mounted on skids so they can be slid out of the way when major work is being done on site. The speed of construction and the easy-to-follow installation guides make QuickStructures the ideal solution for machine and compressor covers.
