| USE | LLAMA SHELTER |

Llama Shelter

This 30' x 40' Arch™ building has been constructed as a shelter for llamas. This building sits on a 4' pony wall and arches are spaced at 5 feet on center. This building is located within a fenced in area and has a QuickStructures™ fabric roll-up door on each end for the llamas to enter and exit through. The two doors and the vents on both ends provide excellent airflow and ventilation. The building also has a conventional man door (purchased locally) to make human access easy as well.

Dramatic temperature fluctuations are moderated by the thermally non-conductive cover. This customer has chosen to use a yellow cover to provide additional shade for the llamas. They have also spread woodchips in and around the building to help manage animal waste.
