

Feature Building

MODEL	QUICKSTRUCTURES UTILITY SERIES
SPECS	26' W X 30' W ARCHES AT 10' ON CENTER
USE	GARAGE

Garage

This QuickStructures™ Utility building has been built for vehicle storage. This building is 26' wide and 30' long with arch spacing at 10' on center. This customer has framed in a conventional garage door (purchased locally) that has been painted to match the sandstone trim of the building.

The QuickStructures™ Utility building protects your vehicles from hail and the damaging effects of the sun on plastic, vinyl, paint finishes and electronics. Not only is this a great building for a garage, it also makes for a naturally bright workshop. Multiple door options and the clear-span design improve vehicle access and maneuverability.

This building is attractive, affordable and easy to install. You can set it up by yourself and no special tools are required. You can also choose from a variety of fabric colors to make sure the building looks great in any yard!
