Dog Kennel

"The moderate temperatures and natural light in our new QuickStructures building creates an excellent environment for raising dogs."

- Dog breeder and satisfied QuickStructures customer

This unique QuickStructures™ Utility Series building serves as a dog kennel. It is 26' wide by 60' long with arches at 5' on center. The building is mounted on a concrete slab that has drains both inside and outside the building. The pipe pocket was ordered custom at 3' above ground level. The cover was then hand pulled the last 3' and screwed to a plastic board that is attached to the concrete. This was done to accommodate outside access doors for each dog. The installer also created a partition inside the building by using a third end wall (ESS and fabric). This wall creates a separate room where supplies can be stored and dogs can be isolated.

Other features include a 10' x 10' fabric door supplied by QuickStructures, a standard man door in each end (purchased locally) and an 18" exhaust fan in one end and shutter in the opposite end to provide proper ventilation (purchased locally).
